

From Numb to Normal

Dell Ariel Goodrick, DDS, FAGD, FALD

OraVerse™ brings you back.

If you're like so many patients, the lingering numbness of local anesthesia is something you've become used to but never comfortable with - it's not easy getting on with your day when part of you is still not feeling or looking normal. Are you ready for a new possibility?

It's about time for OraVerse.

OraVerse is the first and only product of its kind to rapidly reverse the effects of your local dental anesthetic so you can feel, speak, smile, and drink normally in approximately half the time. It is scientifically proven to accelerate the return of normal sensation and function following routine dental procedures.

The same drug used in OraVerse has been utilized in other medical applications for the past 50 years. And now the safety and effectiveness of OraVerse have been successfully demonstrated for dental application use through clinical trials involving pediatric, adolescent and adult patients.

Your return to normal.

Now when you leave your dental office, OraVerse can go with you - moving you comfortably and confidently back into normal activity. And if you feel more like yourself, aren't you more productive?

The average duration of soft tissue numbness following the use of a local dental anesthetic is 3-5 hours. This numbness results in difficulty in speaking, smiling and drinking normally, and occasionally in drooling, or even worse biting your tongue, lip or cheek. OraVerse is administered by the dentist immediately following your procedure, allowing for a return to normal sensation and function in about half the time.

And that's time you can put back in your day...doing what you want to do without limitations caused by lingering numbness. The fee for OraVerse may vary according to office, but should be in the \$20-\$30 range per injection. So ask your dental professional - today may be your day for OraVerse.
